Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Cloning and expression of cDNA encoding Xenopus laevis bone
morphogenetic protein-1 during early embryonic development.";
Gene 134:257-261(1993).
-!- FUNCTION: INVOLVED IN PATTERN FORMATION IN GASTRULA AND LATER
DIFFERENTIATION OF DEVELOPING ORGANS.
-!- DEVELOPMENTAL STAGE: BLASTULA, SARLY GASTRULA AND HATCHED
TADPOLES; LITTLE OR NO EXPRESSION IN WORULA AND LATE GASTRULA.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-FEB-1996 (Rel. 33, Created)

Which is related to the Drosophila dorsoventral gene tolloid and encodes a putative astacin metalloendopeptidase.";
Dev. Biol. 163:175-183(1994).
-!- FUNCTION: CLEAVES THE C-TERMINAL PROPEPTIDES OF PROCOLLAGEN I, II AND II. INDUCES CAPRILAGE AND BONE FORMATION.
-!- CATALYTIC ACTIVITY: Cleavage of the C-terminal propeptide at Ala-|-Asp in type and II procollagens and at Arg-|-Asp in type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- COFACTOR: Binds 1 zinc ion per subunit (By similarity).
-!- ENZYME REGULATION: ACTIVITY IS INCREASED BY THE PROCOLLAGEN C-
ENDOPERTIDASE ENHANCER PROTEIN.
-!- TISSUE SPECIFICITY: AT HIGH LEVELS IN EMBRYONIC MATERNAL DECIDIUM
AND FLOOR PLATE REGION OF THE NEURAL TUBE. LESS IN DEVELOPING
MEMBRANOUS AND THE MESENCHYME OF SPIEEN AND LUNG.
-!- SIMILARITY: EBELONGS TO PEPTIDASE FAMILY MIZA.
-!- SIMILARITY: CONTAINS 2 EGP-like domains.

CERTAIN RECEPTOR INVOLVED IN THE BEVELOPMENT OF THE CARDIOVASCULAR SYSTEM, IN ANGIOCASNESIS, IN THE FORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS SYSTEM.

SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SENAPHORINS. IT BINDS TO SEMAPHORIN 34, THE PLGF-2 ISOPORM OF PGF, THE VEGF-165

INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS.

INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS.

CHARACTER OF THE NEUROPE TO THE REMBRYONIC NERVOUS SYSTEM.

CHARACTER OF THE NEUROPELIN FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            68
activates VEGFR-3 (Flt4) receptor (By similarity).

-I-SUBCNIT: Homodimer; non-covalent and antiparallel (By similarity).

-I-SUBCELLULAR LOCATION: Secreted (By similarity).

-I-PTM: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity toward VEGFR-3 and VEGFR-2. VEGF-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity).

-I-SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         21 GFSIEHRAVKDVSLERSSRSVLERS-----EQQIRAASTLEELLQVAHSEDWK----

Theuropilin, in the mouse nervous system...;

1. Neurobiol. 29:1-17(1996).

2. PONCTION: RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE CARDIOVASCULAR SYSTEM. IN ANOIOGENESIS. IN THE PORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEARPHORINS. IT BINDS TO SEMAPHORIN 34, THE PLGF-2 ISOPORM OF PGF, THE VEGF-165

INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS.

IT MAY REGULAR LOCATION: Type I membrane protein.

C. 1- SIMILARITY: BELONGS TO THE NEUROPPILIN FAMILY.

C. 1- SIMILARITY: CONTAINS 2 CUB domains.

C. 1- SIMILARITY: Contains 2 CUB domains.

C. 1- SIMILARITY: Contains 2 FS/8 type C domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. "Neuropilin-2 and neuropilin-1 are receptors for the 165-amino acid
form of vascular endothelial growth factor (VEGF) and of placenta

growth factor-2, but only neuropilin-2 functions as a receptor for
the 145-amino acid form of VEGF."

J. Biol. Chem. 275:18040-18045(2000)

C. !- FUNCTION: The membrane-bound isoform 1 is a receptor involved in
the development of the cardiovascular system, in anglogenesis, in
the development of certain neuronal circuits and in organogenesis
cutside the nervous system. It mediates the chemorepulsant
activity of semaphorins. It binds to semaphorin 3A, The PLGF-2
isoform of PGF, The VEGF-165 isoform of VEGF and VEGF-16.
Coexpression with KDR results in increased VEGF-165 binding to KDR
as well as increased chemotaxis. It may regulate VEGF-induced

In Independent of the nervous system. In adult tissues, it is highly expressed in heart and placentes; moderately in lung, liver, skeletal muscle, kidney and pancreas; and low in adult brain.

Isoform 2 is found in liver hepatocytes, kidney distal and proximal tubules.
                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. -!- FUNCTION: BINDS TO THE COCH-TERMINAL PROPERTIDE OF TYPE I PROCOLLAGEN AND EMFANCES PROCOLLAGEN C-PROTEINASE ACTIVITY.
-!- FUNCTION: C-TERMINAL PROCESSED PART OF PCPE (CT-PCPE) MAY HAVE AN METALLOPROTEINASE INHIBITORY ACTIVITY.
-!- SUBCELLULAR LOCATION: Secreted.
-!- PIPM: C-TERMINALLY PROCESSED AT MULTIPLE POSITIONS.
-!- SIMILARITY: Contains 2 CUB domains.
-!- SIMILARITY: Contains 1 NTR domain.

```

Prel. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
